

**"Design and Analysis of A.B.I. Hyper-Elastic Structure"**

**INTRODUCTION**

The problem taken up by me was to determine the stress distribution in a dome structure under various loads. The dome structure was modeled using finite element analysis. The results were compared with the analytical results. The dome structure was modeled using finite element analysis. The results were compared with the analytical results.

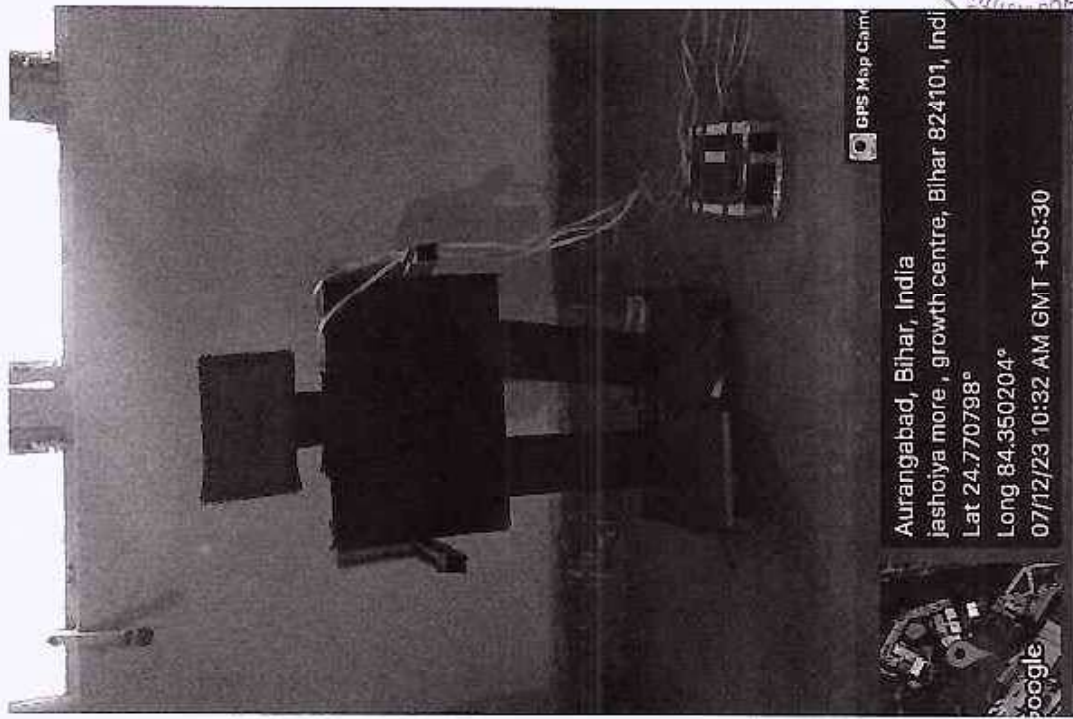

**MATERIAL AND GEOMETRY**

The dome structure was modeled using finite element analysis. The results were compared with the analytical results. The dome structure was modeled using finite element analysis. The results were compared with the analytical results.
